

Part 1 -- Amendments to the Specification

1. Replace the paragraph on page 1, lines 6-8, with the following paragraph:

This invention is a continuation of U.S. application Serial No. 10/415,616 filed April 28, 2003. U.S. application Serial No. 10/415,616 is a continuation in part of U.S. application Serial No. 09/704,223, filed November 1, 2000, now Patent No. 6,626,876 issued September 30, 2003.

2. Replace the paragraph on page 6, lines 8-16, with the following paragraph:

In the embodiment shown in Fig. 1 the drainage body is formed with a slit 27 extending over a substantial part of the length of the drainage body. The slit 27 will allow urine to pass by the obstruction of the urethra when the drainage body 10 is in the extended position. This design of the drainage body can be manufactured in one step in a moulding process. By using silicon it is possible to produce the shape shown in Fig. 1 in one step, because it will release from the mould. Also other materials, such as polyurethane can be used. A stiffening wire (cf. Fig. 3) can be attached inside the slit 27 or be integrated with the drainage body, so as to achieve an appropriate stiffness and a property to return to the contracted position.
